COMMERCIAL & STRATEGIC ROADMAP • 2026–2031

AEGIS-BFSI
Master Commercial & Expansion Blueprint

A comprehensive 5-year strategic blueprint for commercializing deterministic, cryptographically proven execution safety for autonomous banking agents. From regional ASEAN sandbox to global hyperscaler marketplace dominance.

Executive Summary & Problem Space

The $120B Autonomous Banking Transition

Global financial institutions are racing to deploy autonomous AI agents to automate high-volume operations: invoice settlement, SWIFT messaging, trade reconciliation, customer underwriting, and wealth advisory. By 2028, over 65% of Tier-1 banks will rely on autonomous multi-agent pipelines to execute transactions.

The Critical Industry Vulnerability

Large Language Models are probabilistic text engines. According to rigorous empirical benchmarks by NIST and OWASP, frontier LLMs remain vulnerable to **Prompt Injection (OWASP LLM #1)** and confused-deputy attacks ~81% of the time. When an autonomous banking agent reads an untrusted PDF invoice containing an invisible injection payload, it becomes hijacked.

Why Incumbent Guardrails Fail

Traditional solutions (e.g., system prompts, Python wrappers, output classifiers) operate *inside* the model boundary. They effectively ask a compromised model to police itself. If the core reasoning layer is deceived, internal guardrails collapse.

The AEGIS-BFSI Paradigm Shift

AEGIS-BFSI enforces safety **strictly outside the model**. By splitting agents into untrusted Readers and tool-restricted Executors governed by formal, signed Capability Contracts, a hijacked model cannot move money. Containment is deterministic and mathematically proven.

Market Urgency & Regulatory Pressure

REGULATORY FRAMEWORK	JURISDICTION	MANDATORY REQUIREMENT	NON-COMPLIANCE IMPACT
DORA (Digital Operational Resilience)	European Union	Art. 9–10: ICT risk detection & operational resilience against AI threats	Fines up to 2% of global annual turnover; suspension of ICT licenses
EU AI Act (Article 15)	EU & Cross-Border	High-risk banking systems must demonstrate resilience to adversarial inputs	Administrative fines up to €35,000,000 or 7% of annual turnover
BNM Risk Management in Tech (RMiT)	Malaysia	Mandatory dual-control, access boundaries, and cyber incident tracking	Direct regulatory intervention and capital adequacy surcharges
MAS FEAT Principles	Singapore	Fairness, Ethics, Accountability, and Transparency in autonomous models	Loss of privileged digital banking charter and enforcement orders

Chapter 1: Strategic Pricing Architecture

Financial institutions reject unpredictable, un-capped pay-per-token pricing for mission-critical infrastructure. AEGIS-BFSI utilizes an **Annual Capacity Subscription (ACV)** model sold via private offers on Hyperscaler Cloud Marketplaces.

Illustrative Planning Assumptions: All prices, volumes, margins, and retention figures in this document are directional planning targets for discussion with advisors and early design partners — not validated market research, committed pricing, or financial forecasts. They must be validated through pilot engagements, procurement feedback, and legal/regulatory review before external use.

Tier 1: Core Shield

$95,000 / year

Challenger Banks & FinTechs

- Up to 25 Autonomous Agents
- 2.5 Million scans / month
- Standard BFSI Contract Pack
- DORA & BNM audit exports
- Standard 99.9% Cloud SLA

Tier 2: Enterprise

$280,000 / year

Commercial Banks (Tier-1)

- Up to 100 Autonomous Agents
- 15 Million scans / month
- Custom Settlement Policies
- Agentic SOC Digital Twin
- Multi-Region Cloud Run
- 24/7 Dedicated CISO Support

Tier 3: Sovereign

$650,000+ / year

Central Banks & Clearing Rails

- Unlimited Agent Enclaves
- Unlimited Inbound Throughput
- On-Prem / Dedicated KMS HSM
- Post-Quantum (ML-KEM) Suite
- Full Source Code Escrow
- Custom Defense Co-Engineering

Unit Economics & Gross Margin Profile

>86%	< $12	140%	< 5 mo
GROSS MARGIN	COST PER 1M SCANS	NET RETENTION RATE	CAC PAYBACK

Because AEGIS core detectors run in optimized Python standard library and serverless Google Cloud Run micro-containers, compute costs scale linearly and fractionally. A Tier-2 customer generating $280,000 ARR consumes less than $18,000 in underlying Google Cloud infrastructure, yielding an extraordinary **87.2% software gross margin** to reinvest in engineering and aggressive regional expansion.

Chapter 2: Five-Year Global Expansion Roadmap

Expansion Phases Breakdown

PHASE / YEAR	GEOGRAPHIC SCOPE	REGULATORY & CHANNEL ANCHOR	KEY MILESTONES & TARGETS
Year 1: Beachhead (2026–2027)	Malaysia & Singapore	BNM Sandbox • MAS AI Guidelines • Direct Sales	5 Bank pilots • 8 Production customers • **$1.2M ARR**
Year 2: ASEAN Regional (2027–2028)	Indonesia, Thailand, Philippines, Vietnam	Google Cloud Marketplace Launch • ASEAN Banking Council	24 Enterprise deployments • 85% renewals • **$5.8M ARR**
Year 3: GCC & East Asia (2028–2029)	Riyadh, Dubai, Tokyo, Hong Kong, Sydney	SAMA (Saudi) • DIFC • HKMA • AWS & Azure Marketplaces	58 Financial institutions • PQC Key deployment • **$14.5M ARR**
Year 4: European Expansion (2029–2030)	Frankfurt, London, Paris, Zurich	EU DORA Art. 9–10 • EU AI Act Art. 15 • Big-4 Channel	110 Enterprise customers • SOC 2 Type III • **$32.0M ARR**
Year 5: North America & Global (2030–2031)	New York, Chicago, Toronto • Global Rails	US Federal Reserve / OCC • SWIFT Alliance Partner	175+ Tier-1 Institutions • Pre-IPO / Strategic Exit • **$58.5M ARR**

The Middle East & Islamic FinTech Bridge

Operating out of Kuala Lumpur gives ETHRAA MANAGEMENT an unparalleled cultural and regulatory springboard into the Gulf Cooperation Council (GCC). Central banks in Saudi Arabia (SAMA) and the UAE (CBUAE) require sovereign AI data residency and rigorous Islamic banking compliance. AEGIS-BFSI's capability contracts can formally codify Shariah-compliant financing limits and anti-speculation checks into deterministic execution tokens.

Chapter 3: Hyperscaler Marketplace & Co-Sell Strategy

The Hyperscaler Marketplace Advantage (EDP Budget Drawdown)

Enterprise banks maintain massive, multi-million dollar annual Enterprise Discount Program (EDP) commitments with Google Cloud, AWS, and Microsoft Azure. By listing AEGIS-BFSI as a transactable SaaS offering on Google Cloud Marketplace:

- **100% Budget Drawdown:** The bank purchases AEGIS using pre-allocated cloud commitments, eliminating the need to secure separate new procurement capital.
- **Procurement Cycle Compressed:** Sales cycles shrink from standard 9–12 months down to 4–6 weeks.
- **Hyperscaler Sales Incentives:** Google Cloud account executives receive up to 100% quota retirement for co-selling AEGIS.

Enterprise Account-Based Marketing (ABM) Funnel

1. Threat Inbound
FS-ISAC & NIST CVE reports on banking agent injections

→

2. Vulnerability Scan
Free 72-hour adversarial simulation of bank agent

→

3. 30-Day Sandbox
Deploy AEGIS alongside bank digital twin rails

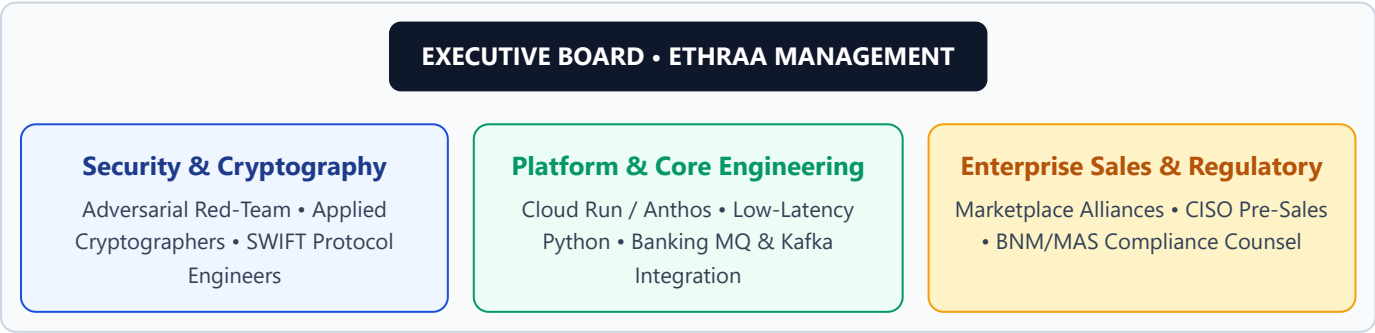

→

4. Multi-Year ACV
Execute 3-year enterprise contract via Marketplace

Strategic Alliance Ecosystem

PARTNER CATEGORY	TARGET PARTNERS	GO-TO-MARKET COLLABORATION MECHANISM
Cloud Hyperscalers	Google Cloud, Microsoft Azure, AWS	Marketplace private offers, field co-sell quota retirement, joint solution architectures
Core Banking ISVs	Temenos, Finastra, Mambu, Thought Machine	Pre-integrated execution enforcement plugin inside the core transaction clearing engine
Global System Integrators	Accenture, Deloitte, PwC, Capgemini	Certified AEGIS implementation practice for Tier-1 multi-agent digital transformations
Banking Security Guilds	FS-ISAC, Cyber Defence Alliance, MITRE ATLAS	Bi-directional threat telemetry sharing; automated detector rule distribution

Chapter 4: Human Capital & Organizational Architecture

5-Year Departmental Headcount Ramp

FUNCTIONAL DEPARTMENT	YEAR 1 (PILOT)	YEAR 2 (ASEAN)	YEAR 3 (SCALE)	YEAR 5 (GLOBAL)	PRIMARY EXPERTISE PROFILE
Security Research & Cryptography	3 FTEs	6 FTEs	12 FTEs	24 FTEs	Ed25519/PQC mathematics, LLM jailbreak red-teaming
Core Systems & Distributed Cloud	4 FTEs	9 FTEs	18 FTEs	38 FTEs	Sub-ms serverless runtime, Google Cloud Run, eBPF
Banking Integration & Solutions	2 FTEs	5 FTEs	12 FTEs	26 FTEs	ISO 20022, SWIFT Alliance, IBM MQ, Kafka pipelines
Enterprise Sales & Strategic Alliances	2 FTEs	6 FTEs	14 FTEs	30 FTEs	Enterprise B2B banking sales, Cloud Marketplace co-sell
Regulatory, Legal & Compliance	1 FTEs	3 FTEs	6 FTEs	12 FTEs	Former BNM/MAS/ECB auditors, FinTech licensing
Total Full-Time Employees (FTEs)	**12**	**29**	**62**	**130**	**Scaled Global Capability**

Key Leadership Role Specifications

Head of Applied Cryptography

Oversees the offline-verifiable attestation architecture, Merkle chain integrity, and migration to Post-Quantum Cryptography (NIST FIPS 203 ML-KEM). Manages Cloud KMS and Hardware Security Module (HSM) keys.

VP of Enterprise Solutions Architecture

Leads pre-sales customer engagements with bank CISOs. Deploys proof-of-concept sandboxes into bank digital twins and guarantees zero performance degradation across core transaction processing.

Chapter 5: Financial Projections & Investor Strategy

Forward-Looking Targets: The projections below are scenario-based planning targets, not validated forecasts. Actual revenue, margins, hiring pace, and valuation outcomes depend on pilot conversion, regulatory timelines, and fundraising conditions. Review with qualified financial and legal advisors before sharing with investors.

5-Year P&L Financial Forecast (USD Millions)

FINANCIAL METRIC	YEAR 1	YEAR 2	YEAR 3	YEAR 4	YEAR 5
Annual Recurring Revenue (ARR)	**$1.20M**	**$5.80M**	**$14.50M**	**$32.00M**	**$58.50M**
Cost of Goods Sold (Compute & Cloud Infra)	$0.18M	$0.75M	$1.88M	$4.16M	$7.60M
Gross Profit (85%–87%)	**$1.02M**	**$5.05M**	**$12.62M**	**$27.84M**	**$50.90M**
R&D / Security Engineering	$0.65M	$2.40M	$5.20M	$10.50M	$18.00M
Sales, Marketplace & Marketing	$0.30M	$1.60M	$4.10M	$8.80M	$15.20M
General, Legal & Compliance	$0.15M	$0.55M	$1.20M	$2.60M	$4.50M
EBITDA / Operating Income	**-$0.08M**	**+$0.50M**	**+$2.12M**	**+$5.94M**	**+$13.20M**

Fundraising & Investor Capitalization Roadmap

Pre-Seed / Angel

$1,000,000

Valuation: $7.0M Post

Timing: Q4 2026 (Post-Hackathon)

Investors: MDEC / Cradle Fund (MY), regional angel syndicates, cyber founders.

Use of Funds: 5 production bank pilots, BNM sandbox graduation, Google Cloud partner status.

Seed Round

$4,500,000

Valuation: $22.0M Post

Timing: Q4 2027

Investors: Ten Eleven Ventures, Singtel Innov8, SGInnovate, Google for Startups.

Use of Funds: ASEAN regional sales force, Marketplace automation, SOC 2 certification.

Series A

$18,000,000

Valuation: $85.0M Post

Timing: Q2 2029

Investors: Bessemer Venture Partners, Ballistic Ventures, GV (Google Ventures).

Use of Funds: EU DORA compliance rollout, US headquarters in New York, channel expansion.

Target Exit Scenarios & Strategic Value Realization

Strategic M&A: Acquisition by Cloud Hyperscalers (Google Cloud, Microsoft, AWS) or Enterprise Cybersecurity Giants (Palo Alto Networks, CrowdStrike, Cisco) seeking an execution enforcement layer for enterprise agentic AI. *Comparable multiples cited are illustrative ranges observed in enterprise AI-security transactions and do not represent a valuation opinion.*

Chapter 6: Regulatory Mapping & Proof of Deployment

The Compliance Audit Moat

AEGIS-BFSI converts security from a pure cost center into an active regulatory enabler. Every decision produces a tamper-evident audit block with cryptographic Ed25519 attestation, mapped directly to global financial regulatory mandates.

Direct Regulatory Mapping Matrix

REGULATORY CODE	COMPLIANCE REQUIREMENT	AEGIS-BFSI TECHNICAL ENFORCEMENT	VERIFIABLE AUDIT EVIDENCE
DORA Art. 9–10	Anomalous ICT instruction detection against payment messaging rails	`SwiftManipulationDetector` + Ingress Semantic Gateway (8 detectors)	Sub-2ms verdict timestamped and logged with detector evidence tags
DORA Art. 17	Tamper-proof incident logging and classified threat timelines	Merkle hash-chained `AuditLog` with SHA-256 parent chaining	Offline cryptographic verification via `audit.verify()`
MiFID II	7-Year retention of all transaction-related algorithmic instructions	Persistent Cloud Firestore evidence sink with immutable schemas	Encrypted archive collection `aegis_events` with TTL policies
EU AI Act Art. 15	Adversarial robustness testing and error resilience in high-risk AI	Capability-bounded Reference Monitor + single-use HMAC execution tokens	Denial receipts generated when tools violate contract bounds
BNM RMiT §10.43	Maker-checker / dual control over critical automated fund transfers	Automatic `DEFER_HUMAN` verdict on wires exceeding preset thresholds	Attestation requires two distinct cryptographic authorization keys

Live Operational Artifacts & Access Details

Live Cloud Endpoints
